Marine Microplastics - Woods Hole Oceanographic Institution

Getting the books mentioned from space for the principles and methods of satellite oceanography: Springer Praxis Books

Global temperatures in 2021 were among the highest ever observed, with 25 countries setting new annual records.

The past seven years have been the hottest on record, new data show.

Florida State University researchers have found a link between the complex patterns of environmental conditions that characterized the La Niña/Marine Heat Anomaly (LMA), which killed about 40% of the ocean's plankton and pollutants to the ocean's climate system.

Scientists boost the accuracy of optical microscopes to image microdroplets in flight and apply the method to analyzing the concentration of plastic nanoparticles. By improving the calibration of a conventional optical microscope, researchers can...
